

## **ENVIRONMENTAL & WASTE MANAGEMENT POLICY**

Construction Profile is committed to the protection of the environment, including the prevention of pollution and the minimisation of wastes associated with the company's business activities. We will do this by striving to implement our industry's best practices for contamination management and consumption of natural resources.

Construction Profile's environmental objectives are:

- ❖ Complying with the Protection of the Environment Operations (POEO) Act 1997 and relevant industry Codes of Practice and other applicable legislations specific to a project.
- ❖ Never incurring any environmental prohibition or protection notices or penalties.
- ❖ Minimising the amount of waste generated at our work sites going to landfill.
- ❖ Maximising the recycling of waste materials.
- ❖ Never contaminating waterways or stormwater systems in any significant way.
- ❖ Ensuring that our management systems comply with the requirements of ISO 14001:2015.

Construction Profile will achieve these objectives by:

- ❖ Providing appropriate financial, physical and human resources to achieve the environmental objectives.
- ❖ Informing all staff and subcontractors of this Environmental & Waste Management Policy through terms of contract, inductions, training, notices, meetings, informal communications, etc to ensure they understand their individual responsibility and the contribution expected of them.
- ❖ Consulting with our clients, subcontractors, suppliers and other interested parties to identify activities that impact on the environment and methods that will minimise their impact.
- ❖ Keeping informed of changes in current legislations, codes of practice and technologies and communicating these to staff through on-going education and training.
- ❖ Setting specific and objective environmental goals, measuring actual performance against these, and conducting reviews to identify opportunities for improvement.
- ❖ Conducting regular inspections and audits of our workplaces to ensure agreed procedures are being adhered to. These may include plans for erosion and sediment control, dust management, noise and vibration management and contamination management (where applicable).
